It seems that there's more than this:

gcore.wiki IN CNAME   einfrastructure-wikis.di.uoa.gr.
gcube.wiki IN CNAME   einfrastructure-wikis.di.uoa.gr.
issue   IN CNAME   newissue.research-infrastructures.eu.
technology.wiki IN CNAME   einfrastructure-wikis.di.uoa.gr.
wiki   IN CNAME   wiki.d4science.org.
H   www IN A   146.48.123.99
www2   IN CNAME   www2gcube.research-infrastructures.eu.
wwwtest IN CNAME   www2-testgcube.isti.cnr.it.

Some of the names could be dismissed, some need to be moved too: gcore.wiki, issue, technology.wiki?

I just changed the DNS so that gcube.wiki.gcube-system.org points to wiki.gcube-system.org in the meantime.

#4 - Oct 14, 2015 07:05 PM - Pasquale Pagano

something is not correct since if I try to go to gcube.wiki.gcube-system.org I am redirected to https://wiki.d4science.org/index.php?title=Main_Page

#5 - Oct 14, 2015 10:04 PM - Andrea Dell'Amico

Now I added gcube.wiki.gcube-system.org as alias of wiki.gcube-system.org in the web server configuration.

Seems working now.

issue IN CNAME newissue.research-infrastructures.eu.
technology.wiki IN CNAME einfrastructure-wikis.di.uoa.gr.
wiki IN CNAME wiki.d4science.org.
H www IN A 146.48.123.99
www2 IN CNAME www2gcube.research-infrastructures.eu.
<wwwtest IN CNAME www2-testgcube.isti.cnr.it.

In my opinion these links can be dismissed. some are wiki, some others were used for tracking issues.
@pasquale.pagano@isti.cnr.it can we dismiss them?

Not for me. Trying https://gcube.wiki.gcube-system.org/gcube/About_gCube I am not redirected to the new wiki site.

All the above can be removed in my opinion

That seems a dns or browse cache problem. The correct resolution is the following:

$ host gcube.wiki.gcube-system.org
gcube.wiki.gcube-system.org is an alias for wiki.d4science.org.
wiki.d4science.org has address 146.48.122.17

Nice. I like removing stuff.

At least the Portal Bundle installation page is gone, or the redirect does not point to it, original link follows:

http://gcube.wiki.gcube-system.org/gcube/index.php/GCube_Portal_Installation

The URL addresses are the same of the old wiki(s) except for the hostname part. If something is missing, then it's a separate issue.

@tommaso.piccioli@isti.cnr.it tells me that the new wiki misses the index.php part. Is it the same for all the other content? If so, we can setup some rewrite rules.

I think so, please restore the index.php part as we need to update some pages (e.g. Portal Bundle, Widget store etc etc)

#13 - Oct 16, 2015 01:22 PM - Andrea Dell'Amico

Can you try it now? The rewrite deletes the /index.php part of the URL but your link now works.

#14 - Oct 16, 2015 02:12 PM - Massimiliano Assante

it seems ok now
