Description I need a new Joomla Installation (similar to #2106). It is necessary for the deployment of a DEMO portal (it must be accessible from outside, in particular during a meeting next week). I think that the server name is not important (something like demo-portal.x.y.z) Please install also the php libraries for SOLR and Mongo. It is not necessary to install JAVA, D-Net, solr and mongo because they are already deployed on other machines .
