| **Target version:** | DataMiner - Pre Installed Software support | | | |
| **Infrastructure:** | Production | | | |

**Description**

To support the new Rubrica algorithm we need that the following software is installed at the java level on DataMiner machines:

https://jena.apache.org/index.html

In particular, the required jars are the following:

<dependency>
<groupId>org.apache.jena</groupId>
<artifactId>jena-core</artifactId>
<version>3.6.0</version>
<type>jar</type>
</dependency>

```
    &lt;dependency&gt;
        &lt;groupId&gt;org.apache.jena&lt;/groupId&gt;
        &lt;artifactId&gt;jena-arq&lt;/artifactId&gt;
        &lt;version&gt;3.6.0&lt;/version&gt;
        &lt;type&gt;jar&lt;/type&gt;
    &lt;/dependency&gt;
```

**History**

**#2 - Mar 12, 2018 05:30 PM - Andrea Dell'Amico**

What's the meaning of *at the java level*? Do we have to install it as a tomcat library? as a tomcat webapp? Is it a standalone application?

**#3 - Mar 13, 2018 06:06 PM - Giancarlo Panichi**

*- Due date set to Mar 13, 2018*

*- Status changed from New to Closed*

*- % Done changed from 0 to 100*

The installation of this software is no longer necessary, we were able to integrate the jars directly in the algorithm.
So we can consider this ticket closed.
