That's ugly. They were requested as dev VMs.

@roberto.cirillo@isti.cnr.it Please move them in the ansible inventory and configure letsencrypt to ask a certificate for the prod name.

The CNAMEs have been created.

I'm still not able to connect to the host by CNAME:

```
TASK [Gathering Facts] *****
*****
fatal: [nlp1.d4science.org]: UNREACHABLE! => {"changed": false, "msg": "Failed to connect to the host via ssh:
ssh: Could not resolve hostname nlp1.d4science.org: Name or service not known\r\n", "unreachable": true}
```

After I confirm the change in the DNS management interface there's nothing I can do. You have to wait for the DNS zone to update itself. And it is, by the way:

```
$ host nlp1.d4science.org
nlp1.d4science.org is an alias for nlp-d.dev.d4science.org.
nlp-d.dev.d4science.org has address 146.48.122.108
```
