I set The VM creation blocked by the ticket tracking refactoring the smart-executor plugin. You don't need to create it until the refactoring has been completed.  
The name of the plugin will be 'accounting-dashboard-harvester-se-plugin' so the name of machien coulbe something like accounting-harvester.

I talk with @pasquale.pagano@isti.cnr.it and we don't need an instance in dev. I'm going to close this ticket. Only production instance will be needed when #11756 will be closed.
