Infrastructure:	Production			

Description

This service cannot be upgraded because 4.12 has builded in java8.
Please check if it works without any upgrade of storage and home-library libraries.
If it not works, we should try to build these libraries in Java7 or better, upgrade this node to Java8.

- Status changed from New to Feedback

No problem has been found while testing the portlets from BiodiversityLab and AquaMaps VREs.
I suggest to keep the current environment and eventually take action in future if some issue is encountered.
