Description

I've checked the following VM @garr:

```
ip-90-147-167-222.ct1.garrservices.it
```

and I've found the attached exceptions after the Performfish algorithm run.

All production machines are active again and all the algorithms are installed.
Now, the production cluster that uses all the Garr machines has also been restored for PerformFish.
I have done some tests and it works correctly.
Please @gianpaolo.coro@isti.cnr.it checks if everything is ok for you too.
