Target version:	GRSF		
Description			
Hi			
Etrumeus teres is the scientific name of a species that is currently known to be only found in the Atlantic and is identified in the ASFIS database as Red-eye round herring (1210503101; RRH). Etrumeus acuminatus, the species we are looking for, is not available in the ASFIS database.			
That's why this record http://data.d4science.org/ctlg/GRSF_Admin/410b7008-866a-3eac-9f42-3feb6fd49589 has E. teres (pulled from the ASFIS database, I believe) BUT in FishSource the species is identified as E. acuminatus.			
The records do not match in GRSF and FS due to conflict on the species' scientific name. I've copied this note to the record's annotation.			
Please advise on how to proceed.			
Marina

Thanks Marina,

if the species is not recognized, the system still keep it with "unk." as coding system.

But in this case I see that the GRSF record you are mentioning http://data.d4science.org/ctlg/GRSF_Admin/410b7008-866a-3eac-9f42-3feb6fd49589 is based on a FishSource source fishery record which does no longer exist: https://www.fishsource.org/fishery_page/3827

In fact now I see this new stock record in FishSource https://www.fishsource.org/stock_page/2356 , therefore:

If what I noticed is correct, I would reject this GRSF record by adding some text in the annotation to explain why. Then, the next data harvest will take the new FS stock/fishery records as appropriate.

Does it make sense for you? If so, please thanks a lot in advance for proceeding.

- Status changed from New to Closed

I've rejected the record, thanks for your help Aureliano.
