

ISTI Open Access - Feature #20094

Alerting and Monitoring facilities for ISTI Open Portal

Nov 09, 2020 08:02 PM - Leonardo Candela

Status:	New	Start date:	Nov 09, 2020
Priority:	High	Due date:	
Assignee:	Andrea Dell'Amico	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	ISTI Open Portal Tasks		
Description			
We should design and deploy a number of monitoring approaches aiming at alerting the service managers about any malfunction. I see at least two families: <ul style="list-style-type: none">• monitoring systems alerting us when the web site openportal.isti.cnr.it is not responding;• monitoring systems alerting us when the primary data source is not responding, e.g. a call to this should be sufficient https://www.cnr.it/oai-pmh/oai2.php?verb=Identify or https://www.cnr.it/oai-pmh/oai2.php?verb=ListSets I do ignore what we have in place right now, certainly we do not have any alert raised when the primary data source (not operated by ISTI) is not responding ... or I'm not receiving any notification.

We do not have anything at the moment, the monitoring system for ISTI is still a work in progress.

We recently faced with an issue on People side, i.e. we have been provided with a smaller number of items. Of course this is an application oriented "malfunction" and we should identify an approach for alerting the right person(s).

In essence, there are at least two typologies of monitoring and alerting we should have:

- alerts on machines and services "availability", "loads";
- alerts on services business logic malfunctions;

We need help from the service to handle this one. I guess a set of prometheus friendly metrics should suffice.

I'm fine with Prometheus and Grafana and willing to play with them:

- Do we have any dashboard for Open Portal? What shall I do to access it?
- Is there any "application context" defined for it?
- Is @michele.artini@isti.cnr.it aware on how to produce "prometheus friendly metrics"?

Not yet

- Is there any "application context" defined for it?
- Is @michele.artini@isti.cnr.it aware on how to produce "prometheus friendly metrics"?

I don't know. I also don't know if there's something specific to Joomla, but there are a lot of php-fpm exporters:

https://github.com/Lusitaniae/phpfpm_exporter,

<https://bidhankhatri.com.np/monitoring/monitoring-php-fpm-pools-through-prometheus-and-grafana-on-centos-6-and-7/>,
