

StocksAndFisheriesKB - Bug #21380

GeoGRSF Intersects Batch

May 10, 2021 10:33 AM - Yannis Marketakis

Status:	New	Start date:	May 10, 2021
Priority:	Normal	Due date:	
Assignee:	Emmanuel Blondel	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	GRSF		
Description			
Dear Emmanuel,			
While refreshing GRSF, we used the corresponding service (found under Data Miner in GRSF Admin VRE) to calculate the spatial intersection/overlapping of different areas.			
In some cases, the service was failing (if the given input was big in size).			
Given a smaller dataset as input, it finished the execution without errors, however, the produced output contained error messages instead of the actual results. Attached you can find an indicative output ().			
Can you please check this out? A small json input to test and reproduce the issue yourself is attached.
