ISTI Open Access - Feature #21881

Update the PHP version

Jul 28, 2021 03:14 PM - Michele Artini

Status:	Closed		**Start date:**	Jul 28, 2021
Priority:	High		**Due date:**	
Assignee:	_InfraScience Systems Engineer		**% Done:**	100%
Category:			**Estimated time:**	0.00 hour
Target version:	ISTI Open Portal Tasks			

Description

The administration pages of our Joomla Installations are reporting the following error:

```
We have detected that your server is using PHP 7.2.13-1+ubuntu14.04.1+deb.sury.org+1 which is obso
lete and no longer receives official security updates by its developers. The Joomla! Project recom
mends upgrading your site to PHP 7.3 or later which will receive security updates at least until 2
021-12-06. Please ask your host to make PHP 7.3 or a later version the default version for your si
te. If your host is already PHP 7.3 ready please enable PHP 7.3 on your site's root and 'administr
ator' directories - typically you can do this yourself through a tool in your hosting control pane
l, but it's best to ask your host if you are unsure.
```

Could you update the PHP version?

History

#1 - Jul 28, 2021 03:18 PM - Andrea Dell'Amico

A VM with ubuntu 18.04 is required, we cannot install newer versions of php on ubuntu 14.04 distributions.
They are also out of support since more than two years, so a new VM should be required anyway.

#2 - Jul 28, 2021 03:26 PM - Michele Artini

That machine hosts 3 joomla portals and the FTP server.

The web server is Apache, it used also to expose the ftp folders and to proxy the oai server running on dnet-openportal.isti.cnr.it.

When could you perform the migration to a new VM?

#3 - Jul 28, 2021 05:00 PM - Andrea Dell'Amico

@tommaso.piccioli@isti.cnr.it ? The dnet and mysql VMs should be upgraded too.

- Status changed from New to In Progress

There are two new VM for dnet and backend (mysql + mongo)

on newdnet.openportal.isti.cnr.it

- Java (OpenJDK 1.8.0_292)
- Tomcat8 (8.5.39-1ubuntu1~18.04.3)

on newbackend.openportal.isti.cnr.it

- MySQL (5.7.35-0ubuntu0.18.04.2):
- Solr (5.5.5)
- Mongo (3.6.3), ubuntu 18.04 distributed version with AGPL v. 3.0 license

#10 - Oct 21, 2021 08:16 PM - Tommaso Piccioli

provisioning of the new openportal VM has ended without problems
this is not to say that everything is as required

new.openportal.isti.cnr.it (openportal.ispc.cnr.it)

- php 7.4 (included php-fpm)
- apache2
- joomla (to be configured)

@michele.artini@isti.cnr.it can you check if there is something wrong?
In the meantime the http/https server answer to openportal.ispc.cnr.it only

#11 - Oct 21, 2021 08:29 PM - Tommaso Piccioli

Still some problem with ftp user configuration

#12 - Nov 17, 2021 01:12 PM - Andrea Dell'Amico

I just created the ftp users and a valid ftp server configuration.
The pattern is the same: the users connect to the ftp server and they find a documents directory. That directory is writeable, while the home directory itself is not.
The ftp server is configured to enforce

@michele.artini@isti.cnr.it I just tested the ispc user with filezilla, and it works. If you want to check your java client, the user is opcontent_ispc.
The hostname is new-openportal.isti.cnr.it.

@tommaso.piccioli@isti.cnr.it I don't know why you didn't setup the PHP environments for the ISTI and ISMAR portals?

#13 - Nov 17, 2021 01:13 PM - Andrea Dell'Amico

- Assignee changed from Tommaso Piccioli to _InfraScience Systems Engineer

#14 - Nov 17, 2021 04:30 PM - Michele Artini

I tested the FTP server from D-Net. I had to change something to support TLS but now it works.

I think that we can inform the ISPC users.
