

ISTI Open Access - Incident #22438

FTP for ISPC Open Portal is not reachable from outside

Nov 18, 2021 01:46 PM - Leonardo Candela

Status:	Closed	Start date:	Nov 18, 2021
Priority:	Normal	Due date:	
Assignee:	_InfraScience Systems Engineer	% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:	OpenPortal Instances		
VREName:	openportal.ispc.cnr.it		
Description			
It seems the FTP site we set up for openportal.ispc is not reachable from "external" clients			
Status: Resolving address of openportal.ispc.cnr.it			
Status: Connecting to 146.48.87.209:21...			
Status: Connection established, waiting for welcome message...			
Error: Connection timed out after 20 seconds of inactivity			
Error: Could not connect to server

History

#1 - Nov 18, 2021 01:50 PM - Andrea Dell'Amico

GARR, or a private provider?

#2 - Nov 18, 2021 01:51 PM - Leonardo Candela

I'm testing it from a private provider

#3 - Nov 18, 2021 01:51 PM - Tommaso Piccioli

same problem from a garr node.

#4 - Nov 18, 2021 02:00 PM - Andrea Dell'Amico

- Status changed from New to Feedback

- % Done changed from 0 to 50

I opened a request to the IIT networking group.

@tommaso.piccioli@isti.cnr.it @leonardo.candela@isti.cnr.it did you use ftp over TLS? The IIT people say that ftp over TLS is already enabled, while plain FTP is blocked,

#8 - Nov 18, 2021 03:55 PM - Tommaso Piccioli

You are right, it is working using ftp explicit over TLS.

#9 - Nov 19, 2021 08:52 AM - Leonardo Candela

- File Screenshot 2021-11-19 at 08.40.59.png added

I didn't manage to connect neither by using ftpes:// nor ftps:// (I'm using Filezilla)

In particular when using ftps:// I see

```
Status:    Resolving address of openportal.ispc.cnr.it
Status:    Connecting to 146.48.87.209:21...
Status:    Connection established, initializing TLS...
Error:     GnuTLS error -15: An unexpected TLS packet was received.
Status:    Connection attempt failed with "ECONNABORTED - Connection aborted".
```

ISPC colleague is reporting the same "issue" ... in attachment the config he is using.

#10 - Nov 19, 2021 09:51 AM - Andrea Dell'Amico

I just replicated the behaviour, trying from home. I'll ask the IIT people again.

#11 - Nov 19, 2021 01:05 PM - Tommaso Piccioli

Now it works (I think the IIT network group did something...), I have successfully connected from two different networks

#12 - Nov 19, 2021 01:56 PM - Andrea Dell'Amico

@leonardo.candela@isti.cnr.it can you get feedback from the ISPC colleague?

#13 - Nov 19, 2021 05:08 PM - Leonardo Candela

- Status changed from Feedback to Closed

- % Done changed from 50 to 100

ISPC colleague managed to connect, issue solved.

#14 - Nov 25, 2021 11:34 AM - Michele Artini

- Status changed from Closed to In Progress

I reopen the ticket because ISPC colleagues have been reported frequent disconnections using FileZilla

I have obtained the same problem using my PC connected to the ISTI network, after few minutes of usage:

```
Stato:     Avvio download di /documents/2019/413302/info.txt
Stato:     Trasferimento file completato; trasferiti 276 byte in 1 secondo
Stato:     Disconnesso dal server
Errore:     Errore GnuTLS -15 in gnutls_record_recv: An unexpected TLS packet was received.
Errore:     Impossibile leggere dal socket: ECONNABORTED - Connessione interrotta
Errore:     Disconnesso dal server
```

#15 - Nov 25, 2021 01:18 PM - Andrea Dell'Amico

I do not understand. If there were no file transfer in action, the disconnection is the expected behaviour.

#16 - Nov 25, 2021 02:45 PM - Tommaso Piccioli

- Status changed from In Progress to Feedback

It looks like an error caused by the filezilla client settings, it can use multiple simultaneous connections and there is an automatic timeout client-side, probably not acknowledge by the server, then the error, maybe due to some directory listing refresh. Next new connection from filezilla, triggered by a click on a directory or a upload/download request, will be successful if the password was saved. It is possible to change timeout, number and frequency of retries and add a timestamp to the log.

#17 - Nov 25, 2021 06:39 PM - Tommaso Piccioli

@michele.artini@isti.cnr.it 5 minutes is the default timeout server-side for the idle connections, can we close this?

#18 - Nov 25, 2021 07:41 PM - Leonardo Candela

- Status changed from Feedback to Closed

Mando una email per capire quale sia il problema ... è evidente che questo della disconnessione non lo sia ma lui ha parlato di problemi durante il download o l'upload.
