

## D4Science Infrastructure - Support #2299

### Install DataMiner on the production machines for 3.10

Feb 18, 2016 11:39 AM - Gianpaolo Coro

<b>Status:</b>	Closed	<b>Start date:</b>	Feb 18, 2016
<b>Priority:</b>	High	<b>Due date:</b>	
<b>Assignee:</b>	_InfraScience Systems Engineer	<b>% Done:</b>	100%
<b>Category:</b>	High-Throughput-Computing	<b>Estimated time:</b>	0.00 hour
<b>Infrastructure:</b>	Production		
<b>Description</b>			
DataMiner should be installed, one machine at time, on the production environment machines:			
dataminer1-p-d4s.d4science.org dataminer2-p-d4s.d4science.org			
After each installation I can run tests to verify the correctness. The recent automatic installation by Andrea @andrea.dellamico@isti.cnr.it works in the development environment (dataminer1-d-d4s.d4science.org).			

#### History

##### #1 - Feb 18, 2016 11:44 AM - Andrea Dell'Amico

dataminer2-p-d4s.d4science.org is updated already, as I wrote yesterday. You only need to start the tomcat instance to be able to test it.

##### #2 - Feb 18, 2016 12:21 PM - Gianpaolo Coro

The following keys should be placed in the tomcat/webapps/wps/ecocfg/PARALLEL\_PROCESSING/ folder to make all algorithms run

```
FARM.gcubekey
d4science.research-infrastructures.eu.gcubekey
gCubeApps.gcubekey
```

I remember this was in the previous production installation script.

##### #3 - Feb 18, 2016 12:32 PM - Andrea Dell'Amico

The script is there, a tag was missing and it was excluded from the upgrade tasks list.  
Now it's fixed and the keys are in place.

##### #4 - Feb 18, 2016 12:39 PM - Gianpaolo Coro

dataminer2-p-d4s.d4science.org works correctly! dataminer1-p has been shutdown, so that dataminer2 responds to dataminer.d4science.org (and works).

Thus, the dataminer.d4science.org service is working now for all the algorithms. That's good news.

Once dataminer1-p will have been installed I will repeat tests on it.

##### #5 - Feb 18, 2016 02:17 PM - Andrea Dell'Amico

- Status changed from New to In Progress
- Assignee changed from Tommaso Piccioli to \_InfraScience Systems Engineer
- % Done changed from 0 to 70

I'm starting the deploy of dataminer1-p

##### #6 - Feb 18, 2016 02:24 PM - Andrea Dell'Amico

- Status changed from In Progress to Feedback
- % Done changed from 70 to 100

dataminer1-p-d4s's upgrade is finished. I shut down the container.

##### #7 - Feb 18, 2016 02:48 PM - Gianpaolo Coro

The tomcat on dataminer1-p-d4s doesn't start or does not respond (no logging and no answers from the applications). Maybe something went wrong when you re-installed the environment?

#### #8 - Feb 18, 2016 05:24 PM - Gianpaolo Coro

It seems to be an issue with the javaassist lib of tomcat. Did you meet this error previously?

```
2016-02-18 14:20:22,579 [localhost-startStop-1] INFO org.apache.catalina.startup.HostConfig- Deploying web application archive /home/gcube/tomcat/webapps/common-smartgears-probe.war
```

```

```

#### #9 - Feb 18, 2016 08:51 PM - Andrea Dell'Amico

This one happens on all the dataminer installation when tomcat starts. I told you on skype the other day about it. It seems harmless.

The problem was instead that /home/gcube/Smartgears/state/ghn.xml was corrupted. Removing the 'state' directory solves the problem. It happens regularly when the container is restarted more than once and there's a small amount of time from one restart and the other. I opened a bug about it some days ago: <https://support.d4science.org/issues/2176>

I just removed /home/gcube/Smartgears/state, you can start the server at any time now.

#### #10 - Feb 18, 2016 09:10 PM - Andrea Dell'Amico

I also imported into the pom.xml used by the playbook the dependencies that you sent me:

```
<dependency>
  <groupId>org.gcube.dataanalysis</groupId>
```

```
<artifactId>ecological-engine-external-algorithms</artifactId>
<version>[1.1.5-SNAPSHOT,2.0.0-SNAPSHOT]</version>
  <exclusions>
    <exclusion>
      <artifactId>slf4j-api</artifactId>
      <groupId>org.slf4j</groupId>
    </exclusion>
    <exclusion>
<artifactId>common-utils-encryption</artifactId>
      <groupId>org.gcube.core</groupId>
    </exclusion>
    <exclusion>
<artifactId>common-encryption</artifactId>
      <groupId>org.gcube.core</groupId>
    </exclusion>
    <exclusion>
<artifactId>accounting-lib</artifactId>
<groupId>org.gcube.accounting</groupId>
      </exclusion>
  </exclusions>
</dependency>
```

**#11 - Feb 18, 2016 09:38 PM - Gianpaolo Coro**

- *Status changed from Feedback to Closed*

It works! Both are in production environment.
