**Description**

The content made available at the following URI http://dataminer.d4science.org/wps/ should be customized, it is currently based on 52' North WPS standard text.

The page should report *at least*:

- information on the service provider, i.e. D4Science;
- a very brief description of the service;
- credits for the underlying technology, i.e. 52' North WPS, as well as for gCube;

- information on "credentials" needed to access the service;
- some links to "standard" calls, e.g. getCapabilities;

According to my understanding this is a page aiming at describing the service for a human user.

---

**History**

**#1 - Feb 18, 2016 03:14 PM - Gianpaolo Coro**

That's only a tomcat html page of the WPS application, which must refer to 52North because of their policies.

When a WPS service goes into a catalogue, the GetCapabilities is indicated only, which also contains metadata and functionalities.
Thus, D4Science reference and the other capabilities are here:

```
http://dataminer.d4science.org/wps/WebProcessingService?Request=GetCapabilities&Service=WPS&gcube-token=aa291a
2b-793c-4e5f-a759-044bd50cd414
```

I remember that it is distributed with a GPL license that does not prevent to change those things. Where you find those policies?
I would believe that we can safely change that page as we prefer.

**#3 - Feb 18, 2016 04:05 PM - Gianpaolo Coro**

That's my interpretation of this phrase in the license page: all contributors sign a Contributors License Agreement (CLA) – a contract between contributors and 52°North, which grants 52°North the rights needed to manage and sublicense the software contributions as part of the 52°North software stack.
The licensing page is here:

```
http://52north.org/about/licensing
```

You will be able to interpret it better than me. Consider that page is present also on other WPS services based on 52N.

**#4 - Feb 18, 2016 04:33 PM - Leonardo Candela**

We should not confuse the software license with the content of a webpage that results from an operational instance / a service based on the software.

I'm quite confident that adding a sentence like ... this service is based on 52' North WPS technlogy is more than sufficient to give credits.

You are more expert than me on this. That is a simple index.hml page, please could you suggest me one alternative?
