Description			
If I extract a codelist from a imported CSV, I want to use only a few columns, now by default all columns are selected. Can we have a 'unselect all', or no column selected at all by default.

- Status changed from New to Feedback

Note:

1) if you select only the column name with a Mouse-Click(not in the checkbox) it selects only one column and deselect the others.

2) if you use Shift-Keys + Mouse-Click(not in the checkbox) it selects groups of consecutive columns

3) if you use Ctrl-Keys + Mouse-Click(not in the checkbox) you can add or remove a column to a selection

I believe this is most powerful than clear all selections.
