Description

The postgresql backups live here: /var/lib/pgsql/backups/.
It's the right opportunity to test the procedure described in #2775

backuppc have to run the backup script named /usr/local/sbin/postgresql-backup before executing the backup.

There's a cron job that runs the backup script daily, but it will skip the execution if the /var/log/backuppc.log file is found on the machine.
