All the cluster have a same version: 4.0.0-4051 Community Edition (build-4051)  
Why the two new server are different ? Version:4.1.0-5005 Community Edition  
This can be a problem?  
It's a configuration that we never tested...

Installed the 4.0.0 version.

Changed the playbook to directly download and install the specific version we want to use. The latest install from the repository is still available, but must be explicitly set.
