

D4Science Infrastructure - Task #6203

Do not rebuild the smartgears container.xml file from ansible if a token was not passed at playbook execution time

Dec 13, 2016 07:12 PM - Andrea Dell'Amico

Status:	Closed	Start date:	Dec 13, 2016
Priority:	Normal	Due date:	
Assignee:	Andrea Dell'Amico	% Done:	100%
Category:	System Application	Estimated time:	0.00 hour
Target version:	UnSprintable		
Infrastructure:	Development, Pre-Production, Production		
Description			
@lucio.lelii@isti.cnr.it is asking to not rebuild the container.xml with the old data if a token request is not performed.			
To obtain that, container.xml needs to be assembled by the get-scopes script and not by an ansible task.			

History

#1 - Dec 13, 2016 07:14 PM - Andrea Dell'Amico

- Status changed from New to In Progress
- % Done changed from 0 to 100

The get-scopes script now, if it's called by the playbook, asks for the scopes tokens and then builds the container.xml file assembling the three template parts.

The ansible playbook runs the get-scopes scripts if an admin token was explicitly passed in a variable to the playbook run.

So, any manual changes to the smartgears configuration will only be overwritten if a token has been passed to ansible.

Needs to be tested.

#2 - Dec 14, 2016 06:31 PM - Andrea Dell'Amico

- Status changed from In Progress to Closed

The script as been tested successfully on ckan-d-d4s.d4science.org
