I cannot understand why we continue to use research-infrastructures.eu domain ... it is a mystery ...  
Sorry ... reading better it will access a postgres db on ...  
You can forget this comment

The machine is running. There are two tomcat instances and an apache frontend before them.  
apache basic authentication is globally active.

You have ssh acces as 'sandro.labruzzo'

- % Done changed from 10 to 100

The new changes:

- New dli user that runs the DLI portal service
- Startup script for the DLI service that also manages the portal code upgrades (run /etc/init.d/dli-portal upgrade to get the updated code)

I need that the hostname **dli.service.research-infrastructures.eu** points to **node0-p-dli.d4science.org:5000**  
Furthermore the hostname **dli.service.prototype.research-infrastructures.eu/oai/\*** should point to  
<http://node0-p-dli.d4science.org:8080/dli/mvc/oai/>
