Lucio already changed the service endpoints.

@lucio.lelii@isti.cnr.it an import of the old databases is needed?

#3 - May 16, 2017 06:35 PM - Andrea Dell'Amico

@tommaso.piccioli@isti.cnr.it it seems that the old tabulardata database is more than 100GB in size. We need to slightly increase the disk space on postgresql-srv-dev.d4science.org before moving it, and we need to decide if and how to backup it.

#4 - May 17, 2017 06:47 PM - Andrea Dell'Amico

For the time being, because the hostname node7.d.d4science.research-infrastructures.eu needs to be moved as alias of auth-d.dev.d4science.org, the old node7.d.d4science's IP has been assigned to the host tabulardata-db-old.d4science.org and the tabulardata's configuration modified to use that hostname as postgresql server.

#5 - Jun 08, 2017 03:57 PM - Andrea Dell'Amico

- % Done changed from 50 to 90

The tabulardata and tabularmetadatabase databases have been restored on postgresql-srv-dev.d4science.org.
