Description

We need a copy of the ckan-grsf-admin machine (https://ckan-grsf-admin.d4science.org/). Its name can be something like ckan-grsf-admin2.d4science.org. We need also a copy of the other platform it needs, i.e. postgresql database and solr index.

The machine eventually will run in /d4science.research-infrastructures.eu/FARM/GRSF_Admin, but for now it's better to have it in dev. Is this possible somehow? (any context there is fine)

Thanks Andrea! Just a couple of observations:

- it seems there is something wrong with the template, and
- what about the content? are index/database empty?

Would it be possible to have the same content we have on the original machine? It would be quicker for some tests I need to do. Otherwise, I will try to copy the content "manually"
